

# PAVING SUPPORT PADS

**WALLBARN'S PAVING  
SUPPORT PADS OFFER  
THE PERFECT SOLUTION  
FOR DECK PAVING.**

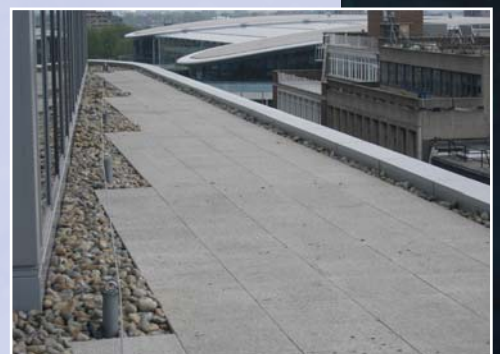

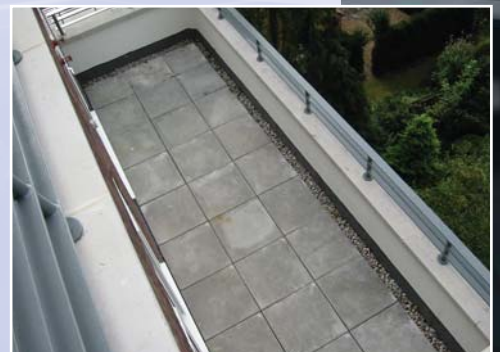

They ensure fast, clean installation of secure and uniform paving when laying slabs onto roofs, balconies or walkways.

Avoid the mess and time involved with laying slabs into mortar. No mechanical fixing is required - the surface is secured by the weight of the slab.

The design includes positioning lugs so that the paving slabs slot into place easily giving clear separation between the slabs, and allowing drainage.

This method of paving cuts down weight on the roof, and contractors can take up or reposition the paving slabs at any time. It creates attractive finishes on decks much faster than by bedding down.

Timber decking can also be laid onto roofs and balconies using Wallbarn support pads.

Wallbarn **Rubber** Paving Support Pads are resistant to extremes of heat and cold and offer good insulation properties to sound or vibration.

Their tough, flexible compound makes them useful on softer surfaces. Lay direct onto insulation boards and waterproof membranes without risk of damage.

Wallbarn **Plastic** Paving Support Pads are designed to stack on top of each other. This allows applicators to continue paving on decks which are not level.

They are produced in four quadrants linked together with a small connector and can be easily snapped apart to create segments of half or quarter, useful in corners and end of runs.

Wallbarn **Adjustable** Plastic Paving Support Pads can be rotated at the head so that the height can be very finely adjusted, to take into account very small, continuous and irregular differences in the levels of a particular area.

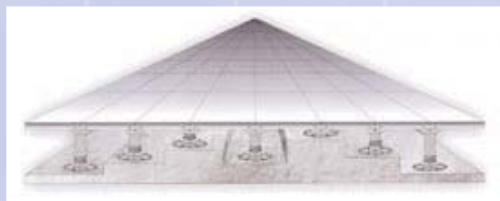

With a height of up to 220mm, they can create large cavities beneath the slab, useful for storage of pipes or cables, for example.

Timber joist frameworks can be fixed to Flat Headed adjustable support pads with wood screws, and timber decking secured on top.

The decking is held suspended from the roof deck, preventing damage to the membrane and rotting of the wood.

**WALLBARN PAVING SUPPORT PADS ARE IDEAL FOR ANY TYPE OF DECK ROOFING. DELICATE SURFACES, UNLEVEL DECKS AND EVEN TIMBER DECKING CAN BE LAID USING WALLBARN PRODUCTS**
