

Data sheet

TPE Extension Shank

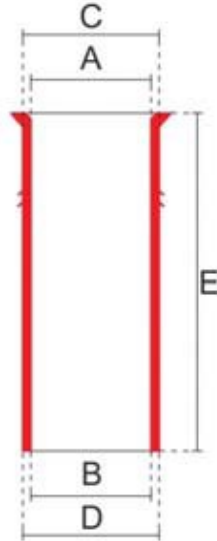

| | | | |
|-------------------------------|---|------------------------------|-----|
| Function: | TPE extension shanks are designed to be used with standard circular downpipe outlets to extend the length of the 240mm long spigot to the desired length. The end of the spigot on the outlet is slid into the top / mouth of the extension shank. The upper flaring at the top / mouth serves to accommodate silicone or other sealant to help provide a secure, long term seal. They have two rings towards the top of the shank which act as a gasket. They will grip the inside of the downpipe to secure the fit and prevent water rising up to the top of the downpipe. | | |
| Compatibility: | They can be used with all through wall / corner outlets supplied by Wallbarn. | | |
| Range: | DN 40 - DN 60 - DN 75 - DN 80 - DN 90 - DN 100 - DN 110 - DN 125 DN 125 for HDPE pipe | | |
| Performance: | Resistant to deterioration by the sun, ozone and other agents or chemicals normally found in the atmosphere. They have excellent flexibility even at low temperatures. The mechanical properties are maintained in the long term. | | |
| Operating temperature: | -20°C; +70°C | | |
| Included accessories: | N/A | Optional accessories: | N/A |
| Material: | TPE | | |
| Recycled product: | No | Recyclable: | Yes |

If not otherwise indicated, all measurements are expressed in millimetres.
