Perimeter Edging Plate Kit

Product Description

The Perimeter Edging Plate Kit is a perimeter bonding kit comprising of a base & head plate. It is designed for fixing porcelain tiles and risers along the edges and corners of outdoor raised flooring systems. Used with Mega Balance adjustable pedestals, it provides a stable, precise and clean edge finish where perimeter tiles are required to be bonded rather than loose laid.

They are installed in pairs, with one plate positioned on top of the pedestal head and the second positioned beneath the pedestal base. The adhesive/silicone passes through the integrated holes and around the side pins, forming a secure mechanical bond without affecting the pedestal's top access height adjustment.

Compatibility

Compatible with Mega Balance adjustable pedestal range.

Performance

The Perimeter Edging Plate Kit is manufactured from polypropylene, providing good resistance to acidic and alkaline substances, UV exposure and adverse weather conditions. Mechanical performance remains stable over time. Reaction to fire classification: E (fl).

Included Accessory

N/A

Recycled Product

Yes

Material

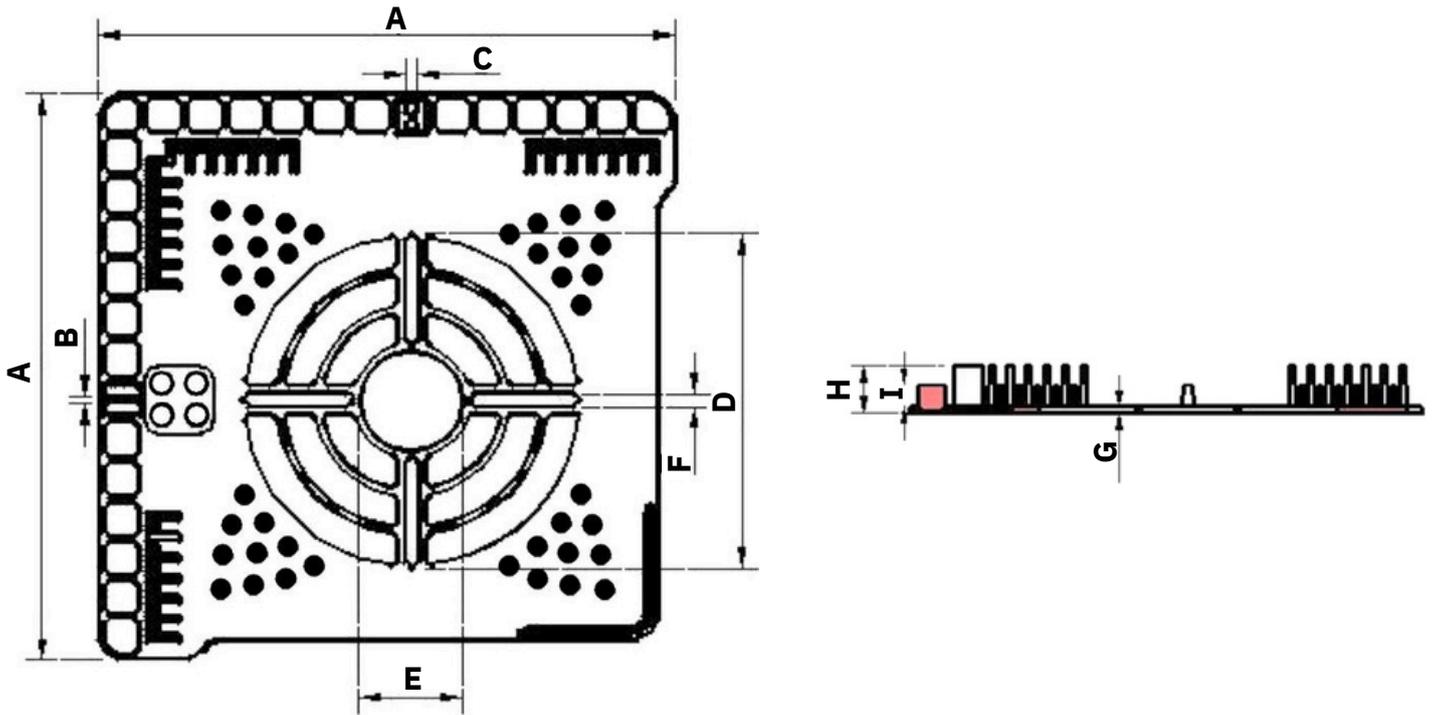

Polypropylene : PP-T20%

Recyclable

Yes

Operating Temperature

-40°C to +75°C
